

**COMMUNICATION NETWORK AND METHOD FOR ENABLING A
MOBILE FEATURE ON A LAND LINE ELEMENT**

Abstract of the Disclosure

In accordance with the preferred embodiments of the present invention, a communication network (110) and a method (600) for enabling a mobile feature on a land line element are described herein. The communication network (110) generally includes a home subscriber server (240), a services client element (220), and a database translation feature server (230). The home subscriber server (240) being operable to provide mobile feature information. The services client element (220) is coupled for communication with the home subscriber server (240) to retrieve mobile feature information based on a registration associated with a subscriber. The database translation feature server (230) is coupled for communication with the services client element (220) to receive the mobile feature information. Furthermore, the database translation feature server (230) is operable to transmit the mobile feature information to a land line element (250).
